

My world is full with demons. Most are invisible, but they are often surrounded by a halo. They are dirty, stinky creatures.

It is like a brise when they pass by you. They can sleek in houses without being seen. They can snatch you and send you to the Netherworld.

It is scary, of course, to have all those ghosts and demons surrounding us. But we have many ways to protect ourselves! Let me tell you about some of them!

I was told that, in your world, demons and ghosts are wandering on earth around this time of the year. This is really weird... In my world, summer is the time for demons and ghosts. But the last days of the month, the moonless ones, also are times when the ghosts visit us.

The offsprings of Arali: who are the Mesopotamian demons?

We cannot see the dreadful uttuku-demons but we know they are in the most horrible things that can happen! Like this texts say.

As for me, I could say, "they are my little sister who broke my toy" or "they are the cat who ate my fish" ! Ok. It might be a little exaggerated....

Where or who are your uttuku-demons? It is convenient to write it because if you say it aloud when you are scared the uttuku will disappear!

They are the waves in the sea

They are the terrors of the marsh

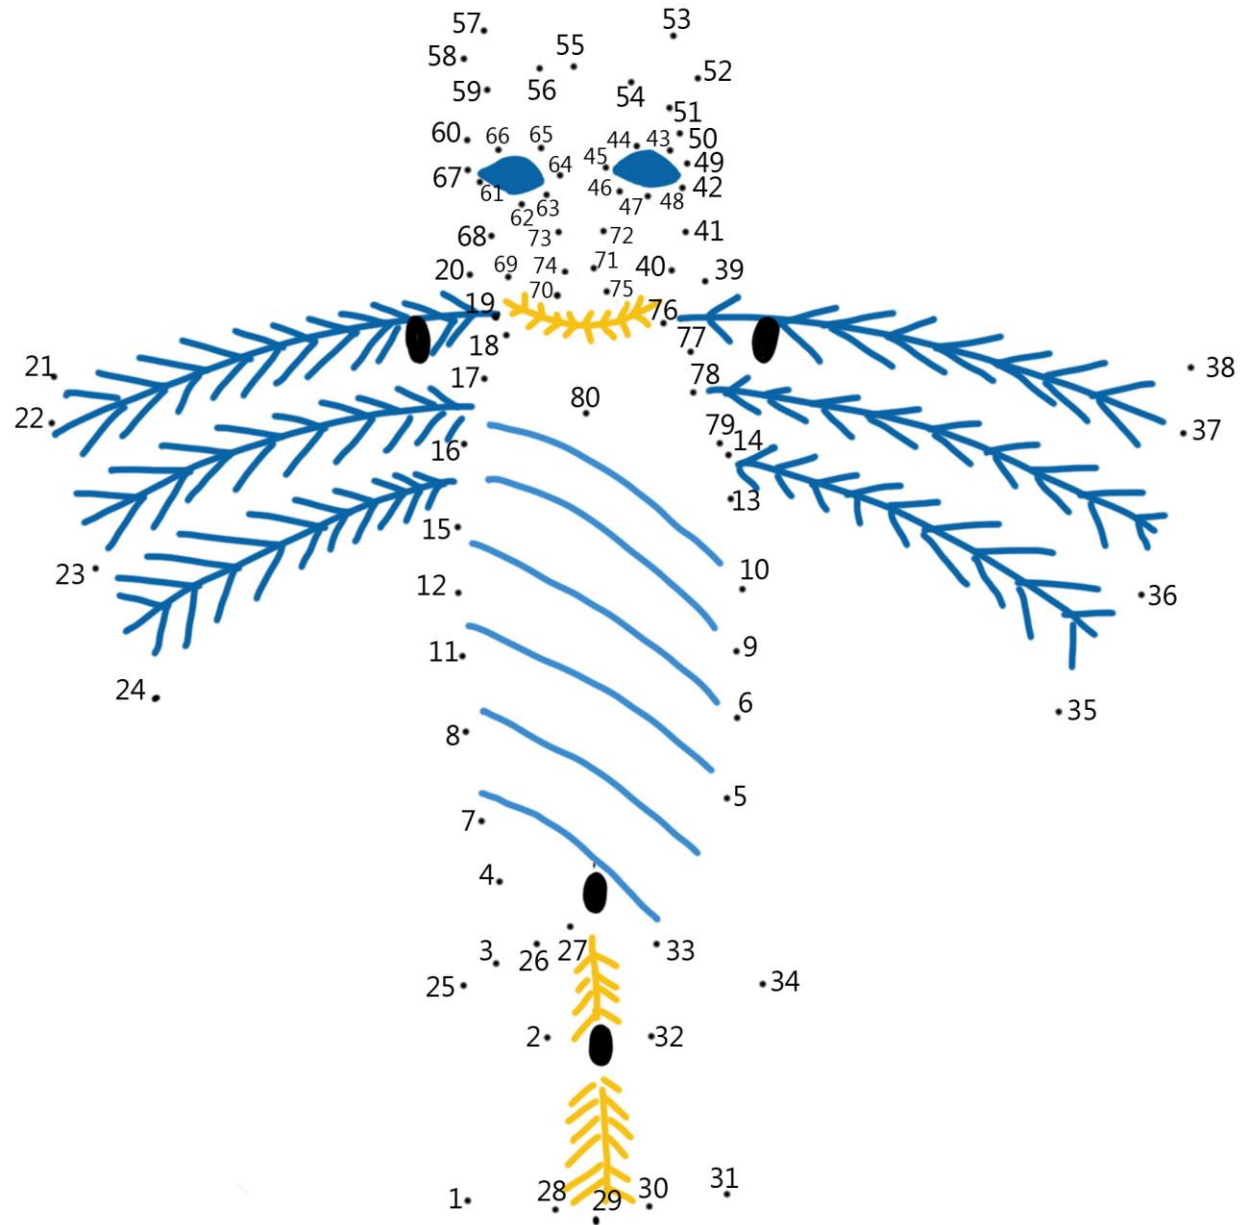

They are the assakku-disease in the canebrake

They are the flaming ambers in the forest

They are the evil web in the mouth of the jar

They are the neglected fruits in gardens

Who is hiding behind the dots?!

He can be terrifying... but also protective against another dreadful demoness

Protection against Lamaštu
